Install PDO-driver for Postgresql

Asked 7 years ago Active 3 months ago Viewed 29k times

When i run

5

`PDO::getAvailableDrivers()`

i can see that the only available driver is sqlite, and i want to use Postgresql. What should i do to accomplish that?

1

centos

php

There is no such package available... – Anton Gildebrand Sep 16 '12 at 17:07

- 1 That's probably because this package doesn't exist in the default repository. [Here](#) you can find instructions about how to add a repository that contains these packages. – Samy Dindane Sep 16 '12 at 17:18

I tried "yum install php54w-pgsql", but then PHP wont work at all (printed in plain text) – Anton Gildebrand Sep 16 '12 at 17:19

Worked it out. Thought php54w-pgsql was a package with php and pgsql, and not only an update. Installed php54w again and php54w-pgsql on top of that :) – Anton Gildebrand Sep 16 '12 at 17:48

Using php5-pgsql solved my problem on CentOS 6 – DeadEye Jul 1 '15 at 9:47

You need to run for php 5.5:

2 `yum install php55w-pgsql`

For php 5.6 command is:

`yum install php56w-pgsql`

If you need another php extension, please read this article: [PHP 5.6 on CentOS/RHEL 7.1 and 6.7 via Yum](#)

If you want to install same driver in PHP 7.0

0 `rpm -Uvh https://mirror.webtatic.com/yum/el7/webtatic-release.rpm`
`yum install php70w-pgsql`
